

High Strength 48.3mm Diameter Galvanised Scaffold Tube Galvanised Scaffold Tube

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: China
- Brand Name: Bythai Scaffolding
- Certification: SGS
- Model Number: BT01
- Price: \$5-\$18
- Packaging Details: In bundles
- Delivery Time: 7-15 days
- Payment Terms: TT/LC
- Supply Ability: 1000tons per month

Product Specification

- Name: Galvanised Scaffold Tube
- Diameter: 48.3mm
- Weight: 6.4kg/m
- Application: Scaffolding
- Tensile Strength: 420N/mm²
- Standard: EN39
- Material: Galvanised Steel
- Thickness: 3.2mm
- Highlight: **48.3mm Diameter Galvanised Scaffold Tube, Galvanised Scaffold Tube 6.4kg/m, 420 N/mm² Galvanised Scaffold Tube**

High-Strength 48.3mm Diameter Galvanised Scaffold Tube Galvanised Scaffold Tube

Product Description:

Product Overview: Galvanised Scaffold Tube

Galvanised Scaffold Tube is a type of seamless pipe that is widely used in construction and building industries for scaffolding purposes. It is made of high-quality galvanised steel, making it strong and durable for various scaffolding applications. With a weight of 6.4kg/m, it is lightweight and easy to handle, yet still has a high tensile strength of 420N/mm² and yield strength of 245N/mm².

Features

Seamless pipe construction for smooth and consistent performance
Galvanised steel material for superior strength and corrosion resistance
Lightweight at 6.4kg/m for easier handling and transportation
High tensile strength of 420N/mm² for maximum load-bearing capacity
Yield strength of 245N/mm² for added safety and stability
Benefits

Strong and durable for use in various scaffolding applications
Resistant to rust and corrosion, ensuring long-lasting performance
Lightweight design for easier handling and transportation
High load-bearing capacity for heavy construction materials
Added safety and stability for workers on scaffolding structures
Uses

Galvanised Scaffold Tube is primarily used in scaffolding structures for construction and building projects. It is commonly used to support workers and materials at different heights, providing a safe and stable working platform. It is also used in various other applications such as:

Scaffolding poles for building maintenance and repair work
Scaffold tubes for temporary structures at events and concerts
Galvanised pipes for plumbing and drainage systems
Why Choose Galvanised Scaffold Tube?

Galvanised Scaffold Tube offers numerous benefits over other scaffolding materials, making it the preferred choice for many construction and building projects. Some of the reasons to choose Galvanised Scaffold Tube include:

High-quality galvanised steel material for superior strength and durability
Lightweight design for easier handling and transportation
Seamless pipe construction for smooth and consistent performance
Resistant to rust and corrosion for long-lasting use
High load-bearing capacity for heavy construction materials
Meets industry standards and regulations for safety and quality

In Conclusion

Galvanised Scaffold Tube is an essential component in scaffolding structures, providing a safe and stable working platform for construction and building projects. Its superior strength, durability, and resistance to rust and corrosion make it a reliable and cost-effective choice for scaffolding applications. Choose Galvanised Scaffold Tube for your next project and experience the benefits for yourself.

Technical Parameters:

Attribute		Value
Name		Galvanised Scaffold Tube
Diameter		48.3mm
Thickness		3.2mm
Material		Galvanised Steel
Yield Strength		245N/mm2
Weight		6.4kg/m
Application		Scaffolding
Tensile Strength		420N/mm2
Surface Treatment		Galvanised
Standard		EN39
Keyword	Description	
Hot Dip Galvanized Scaffolding Steel Tube	A type of scaffolding tube that has undergone the process of hot dip galvanization to protect it from corrosion.	
Galvanised Scaffold Tubes	Scaffolding tubes that have been galvanized to increase its durability and protect it from rust and corrosion.	
Tube and Coupler Scaffolding	A type of scaffolding system that uses tubes and couplers to connect and support the structure.	

Applications:

Galvanised Scaffold Tube - A Durable and Safe Solution for Construction

Are you looking for a reliable and sturdy scaffolding solution for your construction needs? Look no further than Galvanised Scaffold Tube from Bythai Scaffolding! Our product, Model Number BT01, is proudly made in China and certified by SGS, ensuring the highest quality standards. With a price range of \$5-\$18 per tube and a supply ability of 1000 tons per month, we offer a cost-effective solution for your construction needs.

About Bythai Scaffolding

Bythai Scaffolding is a trusted brand name in the construction industry, known for our high-quality and durable products. Our Galvanised

Scaffold Tube is no exception, made with top-grade galvanised steel and weighing 6.4kg/m. This makes it suitable for a variety of construction projects, from building to shoring and even bridge and platform construction.

Why Choose Galvanised Scaffold Tube?

There are many reasons why Galvanised Scaffold Tube is the best choice for your construction needs:

Safety: Our tube and coupler scaffolding system ensures maximum safety for workers, providing a stable and secure platform for construction work.

Durability: Made with galvanised steel, our scaffold tubes are resistant to corrosion and have a high tensile strength of 420N/mm², ensuring long-lasting use.

Versatility: Our scaffold tubes can be used for a variety of construction needs, from building and shoring to bridge and platform construction, making it a versatile solution for all your projects.

Easy to Assemble: With its simple and efficient design, our tube and coupler scaffolding system can be easily assembled and disassembled, saving time and effort on the job site.

Cost-effective: Our Galvanised Scaffold Tubes are competitively priced, providing a cost-effective solution for construction companies and contractors.

Application and Usage

Galvanised Scaffold Tube is suitable for a wide range of construction projects, including:

Building construction

Shoring and support structures

Bridge and platform construction

Maintenance and repair work

Our scaffold tubes are also commonly used in industries such as oil and gas, power plants, and shipbuilding for maintenance and repair work. With its high-quality construction and durability, our Galvanised Scaffold Tube is the go-to solution for all your construction needs.
